work may aid in its comprehension Some of

these machines are not less than are feet wade.

by itself, and making a sheet of paper over

five feet in width. The pulp is pumped into an

elevated tank, from which it is delivered to the machine through an adjustable gate opening

from a reservoir. The amount of purp feel to

the machine regulates and determines the wei, h

of the paper, and of course it must be governed

absolutely and exactly the speed of the ma-

china being a constant. The pulp flows on to

a roller, which deposits it on an endless appoin

of fine woven wice, which has a constantly jar-

ring motion, tending to shake out the water

and aid in the homogeneous union of the par-

icles. Thick rubber straps on each side of

the endless apron determine the width of the

abset. Passing between rollers which com-

press it, the sheet of pulp roes over perforated

boxes from which the air is exhausted by a pump,

and much of the remaining moisture is driven out

by atmospheric pressure. A bath of liquid
